

Job Description

Position: Backend Java Developer

Location: New York, NY

About the Role:

We are seeking an experienced Backend Java Developer to join our growing tech team. You will be responsible for building and maintaining scalable, high-performance backend systems.

Key Responsibilities:

- Develop and maintain RESTful APIs using Spring Boot
- Design and manage microservices architecture
- Optimize database queries and ensure data integrity
- Collaborate with front-end developers and product managers
- Troubleshoot and debug backend issues

Required Skills & Experience:

- 3+ years of experience with Java (11+)
- Proficiency with Spring Boot and Hibernate
- Experience with SQL databases (MySQL, PostgreSQL)
- Knowledge of RESTful API design and development
- Familiarity with Docker and Kubernetes (a plus)
- Strong problem-solving skills and attention to detail

Preferred Qualifications:

- Experience with cloud platforms (AWS or GCP)
- Knowledge of CI/CD pipelines
- Familiarity with Agile methodologies
